

Attila István Kiri

Autonomous systems engineer

Highly motivated and versatile 25-year-old engineer with a passion for continual learning about new technologies, tools and using them in practice. I prefer to work in team or pairs but can even work alone and I enjoy presenting.

Education

2024 -

**Autonomous Systems
MSc**

Technical University of
Denmark (DTU)

2019 - 2023

**Computer Science
Engineering BSc**

University of Szeged

Expertise

- Embedded systems
- ML, DL, AI
- Git, Docker, Gitlab
- Python, C, C++, MATLAB
- Use of Oscilloscopes, Multimeters, etc.

Language

Hungarian

English

Danish

Spanish

Experience

○ **2024 October -**

TOTALENERGIES

Automation Engineer

My main position is in RPA (Robotic Process Automation), where I develop scripts used by colleagues across the company to support finance-related tasks. I am responsible for designing, developing, testing, and maintaining new and existing company scripts and automation flows

○ **2023 march - 2024 July**

Robert Bosch

Cybersecurity Engineer

I tested cybersecurity software modules for automotive transmission systems in laboratory environments, gaining hands-on experience with specialised testing equipment. I also co-led a Power BI project to develop a fast, automated application featuring interactive graphs and reports with automatically refreshing data for stakeholders.

○ **2022 February - 2023 February**

TEConcept Hungary

Software developer

I developed fast and robust software components for industrial communication in C++ based on IO-Link. I gathered requirements, designed the software architecture, created and executed tests, and implemented the software modules.

OTHER EXPERIENCE

I have attended ATENA workshop in Poland about Artificial Intelligence and its uses in real life in a special summer school.

I went on Echange to Universidad Politécnica de Cataluña (UPC) where I learned about human computer interaction, research, innovation and business.
